FAST LANE *VoIP Phone Service*

Crystal Clear Local & Long Distance

The Freeway Platform

The Freeway Platform will maintain the Controls, Call Detail Records (CDR) and Accounting for each company location or home office, whether you have one or multiple locations. You will have a unique username and password to view and make changes or additions to your account. The Platform maintains real time CDR, as well as your remaining credit balance. Pull reports based on location and range of dates.

Rates

Rates are based on commitment level, the more activity that the Account has the lower the rates. Rates are quite stable; however, they are subject to change without notice. Most changes are usually the result of changes in the terminating countries government or L.E.C. PSTN charges. The objective is to continually work towards reducing the rates for our customers. Calls made between customer locations (Point to Point) are at no charge.

Equipment

The Freeway Network and Platform can be used with SIP or H.323 compliant and interoperable gateways, ATAs or IP-PBX systems. Freeway has a full line of advanced customer premise equipment that will accommodate your requirements. Companies that have existing gateways can also be a candidate for the Freeway Network
